

## Inbound Call Conference with DIDforsale api.

Description: With DID, you can create conference calls. Launch as many simultaneous conferences as you need. Select a moderator, chose your hold music.

In inbound call conference, participants calling on DID number can join the call conference.

By default, DID conference rooms enable a number of useful features.

1. Conferences do not start until at least two participants join.
2. While waiting, customizable background music is played.
3. When participants join and leave, notification sounds are played to inform the other participants.

You can configure or disable each of these features based on your particular needs using attributes.

Webhook Url:

<http://yourdomainname.com/Inbound/Index>

Coding Description:

DIDTextToSpeech\Controllers\InboundController.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.Mvc;

namespace DIDConferenceCall.Controllers
{
    public class InboundController : Controller
    {
        // GET: Inbound

        private const string Moderator = "+1XXXXXXXXXX";
        [HttpPost]
        public ActionResult Index(string from)
        {
            string response=string.Empty;
            if (from == Moderator)
            {
                response = "<Response><Dial><Conference startConferenceOnEnter=\"true\"
endConferenceOnExit=\"true\">My conference</Conference></Dial></Response>";
            }
            else
            {
```

```
        response = "<Response><Dial><Conference  
startConferenceOnEnter=\"false\">My conference</Conference></Dial></Response>";  
    }  
    return this.Content(response);  
} }  
}
```

User need to set web hook URL. If user want to make any particular number moderator for the conference need to set his number in given string value in the code. Incoming calls to this number will be joined automatically to the call conference.
